Flo

Go with the flow of life.

🏆 ANZ Diversity Hackathon 2026

🤖 Amazon Women in AI/ML

⚡ The Problem

Modern life does not arrive in one organised stream. It arrives in five, six, or seven simultaneous ones — work meetings in Outlook, family events in Google Calendar, school newsletters buried in your inbox, teacher messages in SeeSaw, and UV alerts you almost missed before Saturday's 7am soccer game.

For anyone juggling multiple responsibilities — a working parent, a carer, a freelancer, a community organiser — the cognitive cost of connecting these streams manually is enormous, invisible, and relentless. No existing tool reads a school newsletter, understands a teacher message, and cross-references them against a work calendar simultaneously. The gap is structural, not incremental.

> Research shows that in households with children, women carry approximately **65–75% of coordination tasks** — school administration, appointment booking, activity logistics — even when both partners work equivalent hours. This imbalance persists because the load is invisible. It does not appear on any calendar. It has never been measured.

Flo is not a parenting app. It is a life coordination platform — and the addressable market reflects that.

✨ The Solution

Flo is an AI-powered life coordination platform built on Amazon Bedrock's multi-agent framework. It consolidates multiple fragmented information streams into a single intelligent view — personalised for every adult in a household.

Ten specialised Bedrock agents each monitor one stream. These agents do not simply retrieve data — they **plan, act, and reason to achieve a goal.** When a school newsletter says *"permission slip due end of next week,"* Flo's Bedrock agent reasons from context to extract a structured deadline — no date field required. The **Invisible Load Dashboard** makes household coordination distribution visible and measurable for the first time.

Users set weekly hour goals for each priority category — Flo tracks actual time allocation and alerts you when a category is falling short before the week is gone.

When a clash is detected, Flo reasons about who in the household is best placed to resolve it and drafts the suggested action — not just a notification, but a solution.

Every Sunday morning, Flo delivers a personalised briefing: here is your week, here is a clash we have already resolved, and here is the time you have not yet protected for yourself. The result — fewer missed deadlines, fewer last-minute scrambles, and a week that actually reflects what matters.

1. **Primary Calendar** — Work meetings & deadlines
2. **Personal Calendar** — Family & social events
3. **Document & Newsletter** — Textract + Bedrock NLP
4. **App & Message** — SeeSaw, SEQTA, Connect Now & messaging
5. **Activities & Events** — Sport, classes, rosters
6. **Weather & Environment** — UV, AQI, forecasts
7. **Conflict Resolution** — Clash detection & drafting
8. **Weekly Summary** — Sunday briefing generation
9. **Activity Classification** — Intelligent categorisation
10. **Orchestrator** — Supervises all 9 agents

👥 Who It Is For & Business Model

Flo is designed for **anyone** managing multiple simultaneous streams — not just parents. The priority categories (Family, Health, Wellbeing, Upskilling) are defaults that users customise for their own life.

- Households with children
- Unpaid carers
- Freelancers & portfolio workers
- Community volunteers

Flo is a SaaS platform with free, Pro, and enterprise tiers, with an enterprise licensing path via AWS Marketplace for organisations supporting working parents and carers.

What Is Built

Flo is a deployed React PWA on AWS Amplify, built using **spec-driven development with Kiro** — AWS's agentic IDE — enabling rapid, structured delivery of a production-grade multi-agent platform within the hackathon timeframe.

FULLY DEPLOYED

- ✓ 10 Bedrock agents + Orchestrator
- ✓ Conflict detection & resolution
- ✓ Weekly summary generation
- ✓ Invisible Load Dashboard
- ✓ Weather & UV integration
- ✓ Cognito auth & data isolation
- ✓ Audit logging & backup monitoring
- ✓ 25+ UI components, offline PWA
- ✓ 100+ automated test cases

ROADMAP

- ◑ OAuth UI connection & real-time dashboard
- ◑ Voice briefing via Amazon Polly
- ◑ Carer-specific agent & GP integration
- ◑ Enterprise licensing via AWS Marketplace

Social Impact

Flo makes the invisible load visible — for parents, carers, volunteers, and anyone carrying disproportionate coordination responsibility. It democratises AI for non-technical everyday users. It supports the mental health of anyone whose personal time goals are consistently unmet. It was built for the people who hold everything together.

The Team

Sheryl Philip
Cloud Platform & DevOps Engineer

Anita Birje
Data & Integration Engineer

Flo was built using **Kiro** — AWS's agentic IDE — by a two-person team. Built from lived experience, not assumption.

Flo — Go with the flow of life.
